

REFERENCE CARD: CHIVES

- **Most common pests & diseases:**

Rare; most common in hydroponic systems are viruses and fungus gnats

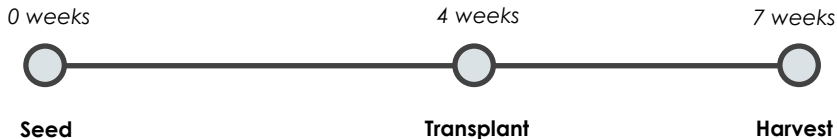

- **EC:** 1.8 to 2.2
- **pH range:** 6.1 to 6.8
- **Temperature:** 65-80° F
- **Light:** 12+ hrs

Planting:

- Chives can be planted from seed or from root (by breaking apart mature plants), which is usually faster.

Harvesting:

- Chives should be harvested every 2-3 weeks by cutting the plant to 1-2 inches from the crown.
